
ENVIRONMENTAL MANAGEMENT POLICY

CC Pines is committed to the prevention of environmental issues across all our sites through compliance with relevant environmental legislation and regulations. We employ socially acceptable and cost effective strategies to mitigate threats to the environment and provide protection to clients, the general public, and the company's employees.

Through risk assessment processes during the design and construction phases of our projects, we identify potential environmental risks and establish control strategies to minimise their impacts from construction through to the completed project end use.

We are committed to the prevention of pollution through the adoption of processes, practices, materials, and products that avoid, reduce, or control pollution and undertake to comply with relevant environmental legislation and regulations.

In order to reduce the environmental footprint left by our construction activities, we focus on minimising waste through:

- product selection and the use of recycled products,
- segregating construction waste to facilitate recycling, and
- evaluating construction processes to ensuring they are as efficient as possible.

We have a sound understanding of Environmentally Sustainable Development principles. We undertake to continue acquiring knowledge and applying these principles when delivering both Design & Construct and Construct Only projects.

Our commitment to continuous improvement is demonstrated by our adoption of the Management System Standards AS/NZS ISO 9001:2008, AS 4801:2001 and AS/NZS ISO 14001:2004. Our system procedures ensure that we set, monitor, review and upgrade our environmental objectives and targets where necessary.

All our employees and subcontractors are inducted on the practical application of our Environmental Policy, which is openly available to all personnel and the public.
