

SITE MANAGEMENT POLICY

Through the effective use of our resources and establishing and following thorough project plans, we manage and deliver our projects in an efficient manner in terms of time, cost, accuracy and satisfaction for all concerned.

With strict adherence to plans, policies, procedures and inductions, CC Pines staff and all sub-contactors work in an understood and standardised manner that achieves a consistent approach to safety, environmental management, specific site conditions and project outcomes.

Our ISO 9001:2008 certified Quality Management System provides the framework to manage our projects and sites with a high attention to detail, controlling all documents and drawings to the correct revision, establishing and maintaining effective communication channels, achieving all legal and regulatory requirements and maintaining project progress to set timelines.

Working to this system, coupled with client specific procedures and constraints, allows our projects to be delivered to the satisfaction of our clients, sub-contractors and suppliers and the continuation of our competitive advantage in the market place.
